

GENERAL AVIATION STATISTICAL DATABOOK

1984 Edition

FOREWORD

The GENERAL AVIATION STATISTICAL DATABOOK has provided the answers to hundreds of inquiries about the general aviation industry.

For 1984, the DATABOOK presents new information about the uses of various aircraft types on page 10. Included are data on executive, business, commuter, instructional and personal flying and other activities. This perspective is important as general aviation activity continues to be concentrated on business and commercial flying.

The data presented for the primary uses of active general aviation aircraft represents 1982, the latest year for which information is available. For prior year and forecast trends in general aviation fleet size and composition, please refer to page 24.

As always, we at GAMA are interested in making your analysis of general aviation as accurate and complete as possible. If you need more information or assistance, call or write.

Estimated: 1980 is based on a 27-month criteria only. Other years are based on a 25 month criteria.

¹Numbers represent all certificates on record. No medical examination required.

²Special ratings shown on pilot certificates, i.e., do not indicate additional certificates.

³The decrease in the number of airman resulted from a purging of the airman certification files. During this process, approximately 26,000 duplicates or faulty records were eliminated.

⁴Does not include approximately 15,000 air traffic controllers whose medical certificates are no longer processed by the Civil Aeronautical Institute (CAMI). They are being processed by a separate system, and will be included in future counts.

⁵Revised.
